U.S. Citizen | Clearance: Top Secret (SSBI)

PROFESSIONAL SUMMARY

CISM-certified cybersecurity engineer, consultant, and security leader with 20+ years of experience supporting Department of Defense, federal, and commercial environments. Expertise spans cloud security, penetration testing, digital forensics, vulnerability management, incident response, Linux and Windows hardening, security automation, and governance, risk, and compliance. Extensive experience with CMMC, RMF, FedRAMP, DISA STIGs, NIST SP 800-53, and NIST SP 800-171. Proven ability to translate technical and regulatory requirements into practical safeguards, remediation plans, and executive-level risk decisions.

CORE COMPETENCIES

- Governance, Risk, and Compliance: CMMC, RMF, FedRAMP, NIST SP 800-53, NIST SP 800-171, DISA STIGs, CIS Benchmarks, System Security Plans (SSPs), Plans of Action and Milestones (POA&Ms), control assessments, and continuous monitoring.
- Security Assessment and Operations: penetration testing, vulnerability management, attack-path analysis, threat hunting, incident response, digital forensics, malware analysis, compromise assessments, SIEM engineering, and EDR/XDR operations.
- Cloud and Infrastructure Security: AWS, Microsoft Azure, Google Cloud Platform, Oracle Cloud Infrastructure, Zero Trust, IAM, network segmentation, encryption, PKI, Active Directory, Linux, Windows Server, VMware, and secure remote access.
- Engineering and Automation: Ansible, Terraform, Bash, PowerShell, Python, Git, Jenkins, Docker, Puppet, Chef, SCCM, security configuration management, remediation automation, and infrastructure as code.

TECHNICAL SKILLS

Security and Monitoring: Splunk, ELK Stack, Wazuh, SentinelOne, ArcSight, Trellix/McAfee HBSS, Armitis, Nagios, Cacti, Netcool, IDS/IPS, SIEM, EDR, and XDR

Vulnerability and Penetration Testing: ACAS/Tenable, Nessus, Rapid7 InsightVM, Qualys, OpenVAS, Nmap, Burp Suite, OWASP ZAP, HP WebInspect, Metasploit, Kali Linux, Wireshark, and tcpdump

Cloud Platforms: AWS (EC2, ELB, CloudWatch, and EMR), Microsoft Azure, Google Cloud Platform and Security Command Center, and Oracle Cloud Infrastructure

Operating Systems and Virtualization: Red Hat Enterprise Linux, CentOS, Oracle Linux, Ubuntu Server, SUSE Linux Enterprise Server, Microsoft Windows Server, and VMware

Enterprise Infrastructure: Active Directory, Group Policy, IAM, PKI and digital certificates, DNS, DHCP, WSUS, firewalls, VPNs, Apache, JSON, ServiceNow, JIRA, and Confluence

Digital Forensics and Incident Response: endpoint artifact analysis, cloud and authentication log analysis, timeline reconstruction, evidence documentation, threat hunting, compromise assessment, and malware analysis

CERTIFICATIONS

- Certified Information Security Manager (CISM) - ISACA
- Microsoft Certified: Azure Administrator Associate (AZ-104)
- CompTIA Security+ CE
- Microsoft Certified Solutions Associate (MCSA): Windows Server
- NARTE Class III Certified Technician
- C-Tech Fiber Optic Cabling Certification
- C-Tech Copper-Based Systems Certification
- DISA HBSS 201, 301, and 501 Certificates
- DISA ACAS Operator

PROFESSIONAL EXPERIENCE

Founder / Senior Cybersecurity Engineer (MSSP) | One Circle Solutions, LLC

Montgomery, AL | March 2018 - Present

- Lead managed security service provider operations delivering cybersecurity, vulnerability management, penetration testing, compliance, and infrastructure security services for commercial and regulated clients.
- Design, deploy, and manage secure multi-tenant environments spanning on-premises infrastructure, cloud workloads, remote-access solutions, endpoint security, SIEM integrations, and compliance monitoring.
- Conduct CMMC and NIST SP 800-171 readiness assessments for small and midsize businesses handling Controlled Unclassified Information (CUI), identify control gaps, and develop prioritized remediation strategies.
- Implement and validate safeguards across all 14 NIST SP 800-171 control families, including Access Control, Audit and Accountability, Configuration Management, Identification and Authentication, Incident Response, Risk Assessment, and System and Information Integrity.
- Develop SSPs, POA&Ms, incident response procedures, security baselines, and continuous monitoring strategies aligned with CMMC, RMF, NIST SP 800-171, and NIST SP 800-53.
- Perform network, cloud, web application, and API penetration testing using Nessus, Rapid7 InsightVM, Qualys, Nmap, Burp Suite, Metasploit, Kali Linux, Wireshark, OpenVAS, and OWASP methodologies.
- Manage vulnerability programs using Nessus, ACAS/Tenable, Rapid7 InsightVM, SCCM, and Qualys to identify, prioritize, remediate, and validate findings across Windows, Linux, cloud, and hybrid environments.
- Engineer secure AWS, Azure, OCI, and Google Cloud architectures using Zero Trust principles, multifactor authentication, segmentation, encryption, centralized logging, and least-privilege access.
- Build and operate security monitoring platforms using Splunk, ELK Stack, Wazuh, SentinelOne, ArcSight, and Microsoft security tools to improve detection, response, and compliance visibility.
- Harden Linux and Windows systems using DISA STIGs, CIS Benchmarks, Ansible, PowerShell, Bash, SCCM, and automated configuration-management processes.
- Lead incident response, threat-hunting, malware-analysis, compromise-assessment, and forensic-analysis activities using endpoint telemetry, SIEM correlation, firewall logs, and host and network artifacts.
- Develop Bash, Python, and PowerShell automation for compliance auditing, patch validation, vulnerability remediation, account management, secure onboarding, and infrastructure hardening.
- Translate technical findings into executive risk assessments, remediation roadmaps, audit evidence, and compliance reporting for customer leadership and stakeholders.
- Design secure remote-access and cyber-lab environments using virtualization, segmented networks, VPN technologies, EDR/XDR platforms, and centralized monitoring.

Senior Cybersecurity Engineer | USPO

Montgomery, AL (Remote) | January 2025 - June 2025

- Conducted advanced cloud penetration testing and security assessments across Google Cloud Platform, Microsoft Azure, and hybrid enterprise environments, identifying IAM weaknesses, privilege-escalation paths, exposed services, and insecure configurations.
- Used Google Security Command Center, Splunk, SentinelOne, and custom detections to perform threat hunting, attack simulation, and compromise assessments across enterprise cloud infrastructure.
- Conducted digital forensics and incident response investigations involving endpoint and cloud assets; analyzed endpoint artifacts, authentication and audit logs, SIEM telemetry, and network data to reconstruct activity timelines, identify indicators of compromise, and document defensible findings.
- Performed vulnerability exploitation validation and cloud attack-path analysis using Terraform, native cloud tooling, Nmap, Burp Suite, Kali Linux, and custom scripts.
- Tested cloud-hosted web applications and APIs for authentication flaws, token-handling weaknesses, insecure permissions, unintended exposure, and OWASP Top 10 risks.
- Integrated penetration-testing results with SIEM analytics and cloud telemetry to strengthen detection engineering, incident-response visibility, and Zero Trust controls.
- Executed security validation exercises aligned with NIST SP 800-53, RMF, FedRAMP, and CMMC requirements to verify safeguard effectiveness.
- Led development and customization of cybersecurity tools and integrations involving Splunk, Armis, SentinelOne, and Microsoft IRM to improve detection, response, and compliance capabilities.
- Delivered technical findings, remediation guidance, forensic investigation summaries, and executive risk assessments to engineers, compliance personnel, and leadership.

Senior Cybersecurity Engineer | TCecure, LLC

Baltimore, MD | May 2022 - Present

- Conduct internal and external penetration tests across enterprise Windows, Linux, cloud, network, and web application environments to identify exploitable vulnerabilities, insecure services, misconfigurations, and privilege-escalation paths.
- Perform vulnerability discovery, exploitation validation, and attack-surface analysis with Nessus, Rapid7 InsightVM, Qualys, Nmap, Burp Suite, Metasploit, Kali Linux, Wireshark, tcpdump, and OpenVAS.
- Execute web application testing with HP WebInspect, Burp Suite, OWASP ZAP, and manual techniques to identify injection flaws, cross-site scripting, weak authentication, session-management issues, and authorization failures.
- Conduct authenticated and unauthenticated network assessments to validate firewall exposure, insecure protocols, lateral-movement opportunities, and segmentation weaknesses.
- Assess Active Directory security through user and group enumeration, privileged-access reviews, delegation analysis, password-policy validation, and attack-path identification.
- Use Splunk, ELK Stack, SentinelOne, and SIEM telemetry to correlate attack indicators, conduct threat hunting, and validate detection capabilities during assessments.
- Develop Bash and PowerShell scripts to automate reconnaissance, vulnerability validation, security auditing, and compliance verification aligned with DISA STIGs and NIST SP 800-53.
- Produce technical penetration-testing reports, executive risk summaries, remediation roadmaps, and post-assessment validation results for leadership, engineering, and compliance stakeholders.

Network Engineering Subject Matter Expert | Astrion US

Maxwell AFB - Gunter Annex, Montgomery, AL | March 2021 - May 2022

- Designed, integrated, and maintained Oracle Cloud Infrastructure PaaS and IaaS solutions for multi-tenant Impact Level 4 and Impact Level 5 workloads.
- Led technical interchange meetings with DoD stakeholders for migration planning, data-transfer validation, security documentation, and operational readiness.
- Engineered hybrid OCI, Azure, and AWS architectures and disconnected failover environments to improve scalability, compliance, and mission continuity under communication constraints.
- Sustained enterprise infrastructure services for 700 users across four teams, integrating cloud platforms, virtualization, observability, cybersecurity, and incident-response capabilities.
- Automated cloud workflows across eight zones using virtual desktop infrastructure, JIRA, and Atlassian tools, reducing process time by 25 percent and improving deployment efficiency.
- Directed infrastructure services for four development teams, integrating firewalls, anti-malware, intrusion detection, and secure configuration controls while shortening release cycles by 30 percent.
- Evaluated performance and migration readiness for more than 800 systems moving from on-premises infrastructure to cloud environments.
- Designed security solutions aligned with SABSA and NIST SP 800-53, contributing to a reported 50 percent reduction in security incidents.
- Provided Tier 3 troubleshooting, system-capacity planning, cloud governance, identity security, and cost-optimization support that contributed to a 20 percent reduction in annual IT spending.
- Managed VMware environments, server hardware and software, and Elastic Stack observability while documenting changes and configurations in Confluence.

Senior Cybersecurity Engineer | SMS Data Solutions / Cyber Defenses Inc. - 26th NOS, AFINC

Maxwell AFB - Gunter Annex, Montgomery, AL | October 2015 - March 2021

- Administered 12 security stacks supporting DISA implementations across the Army, Air Force, and Navy, integrating endpoint protection, EDR, XDR, vulnerability management, and centralized monitoring.
- Secured Impact Level 2 through Impact Level 6 environments using DISA STIGs, RMF, FedRAMP High controls, and continuous compliance validation.
- Performed application and infrastructure security assessments, web application testing with HP WebInspect, vulnerability analysis, threat modeling, architecture reviews, and remediation tracking aligned with RMF and DISA requirements.
- Used ACAS/Tenable, Nessus, WebInspect, and raw security data to identify vulnerabilities, validate OWASP Top 10 risks, and produce actionable guidance for engineers, ISSOs, and leadership.
- Developed Ansible and Bash automation to enforce Impact Level 6 STIG baselines, security validation, remediation, and configuration standards across more than 300 RHEL and Windows systems.

- Collaborated with NSA, GSA IT, and Air Force program offices to validate cyber readiness for classified network expansions and accreditation reviews.
- Installed and configured more than 13 Linux applications, including Splunk, ACAS, and Netcool, and administered five DoD-compliant McAfee Host Based Security System servers.
- Managed 24 VMware environments containing 300 RHEL servers and administered host-based security across more than 1,500 endpoints and appliances.
- Configured Active Directory, DNS, DHCP, WSUS, NTP, backups, firewall policies, and access controls across four regional domains during migration to centralized architectures.
- Led vulnerability and patch management for more than 300 Linux and Windows hosts, including kernel updates, remediation validation, and compliance reporting.
- Developed and maintained Nagios, Cacti, and Netcool monitoring across 12 gateways to improve availability, performance visibility, and incident response.
- Engineered a Secure Access Service Edge framework with Zero Trust principles for on-site and remote users, devices, and applications.

Systems Administrator / Security Engineer | DISA / Lockheed Martin / NCR / Indus Corp

2010 - 2015

- Implemented and maintained systems aligned with NIST SP 800-53 and RMF security controls.
- Managed patching, hardening, and vulnerability remediation across Linux and Windows environments.
- Supported incident response, security monitoring, and audit logging aligned with Audit and Accountability and Incident Response control requirements.
- Configured Active Directory, DNS, DHCP, and enterprise infrastructure services using security best practices.
- Developed automation scripts to enforce secure configurations and compliance baselines.
- Conducted system audits and security assessments to identify vulnerabilities and verify remediation.

EDUCATION

Trenholm Technical College | Montgomery, AL

Associate Degree, Information Technology | 2006
