

EDDIE L. BARLOW

Montgomery, AL 36117, United States
Mobile: 334-652-1366 | eddiebarlowjr@gmail.com
<https://www.linkedin.com/in/eddie-barlow-jr-68802716>

Citizenship: United States of America | Veterans Preference: No
Clearance: Top Secret SSBI | Availability: Immediate | Job Type: Permanent, Full-Time, Part Time

Professional Summary

Results-driven **Cybersecurity and Systems Administration Professional** with over **20 years of experience** managing mission-critical DoD and enterprise environments up to **Impact Level (IL) 6**. Extensive background leading **Technical Interchange Meetings (TIMs)**, performing **system migrations**, and maintaining compliance with **DISA STIGs, RMF, and NIST 800-53** standards. Proven success integrating and managing hybrid-cloud infrastructures across **Oracle Cloud Infrastructure (OCI), Azure, and AWS** platforms, including **PaaS/IaaS deployments, security hardening, and disconnected operations** for classified systems. Adept at automating secure builds, hardening Linux/Windows systems, and enhancing operational resilience for DoD networks.

Areas of Expertise: IT Cybersecurity, Program Evaluation & Management, Information Systems/Network Security, Information Resources Strategy and Planning

Certifications

- ISACA CISM (Certified Information Security Manager)
- MCSA Windows Server
- Azure Associate AZ-104
- CompTia Security + CE
- NARTE Class III Certified Technician
- C-Tech Fiber Optics Certified Cabling
- C-Tech Copper Based Systems Certified
- Certificate DISA HBSS 201, 301, and 501 Certificate

Skills

Operating Systems: CentOS, Red Hat Enterprise Linux (RHEL), Oracle Linux, Ubuntu Server, SUSE Linux Enterprise Server, Microsoft Windows (including Windows Server environments)

Cloud Platforms: Amazon Web Services (AWS, EC2, ELB, CloudWatch, EMR) Microsoft Azure (Azure AD, Azure Security Center) Google Cloud (Google Cloud Security Command Center), Oracle Cloud (focus on security features and configurations)

DevOps & Automation: Ansible (for security automation and configuration management) Docker (container security) Jenkins (secure CI/CD pipelines)
Bash scripting (automation of security tasks) Terraform (secure infrastructure as code) Microsoft System Center Configuration Manager (SCCM for Windows environment management)

Network & Security: DHCP, DNS, Firewall management (configuration and maintenance) IAM (Identity and Access Management) ArcSight (SIEM tool for threat detection and response) Group Policy (Windows security policies) Vulnerability scanning tools (Nessus, Qualys) Intrusion Detection Systems (IDS) and Intrusion Prevention Systems (IPS) Endpoint Detection and Response (EDR) tools security Information and Event Management (SIEM) systems like Splunk

Monitoring & Management Tools: Dynatrace ITSM JIRA (Atlassian) ELK Stack (Elasticsearch, Logstash, Kibana) Network monitoring and forensics tools (Wireshark, TCP Dump) Nagios (for monitoring IT infrastructure and systems) ServiceNow (for IT service management and operations)

Configuration & Deployment: Apache (secure server configurations) JSON (for configuration of security tools and data exchange) Git (secure source code management) ERP Systems (secure configuration and management) Puppet (automated server setup and maintenance)
Chef (infrastructure as code for automated system management)

Vulnerability Management: Proficient with vulnerability management solutions such as Rapid7, InsightVM, ACAS(Tenable), Qualys.

Web-Scanning Software: Experienced with web-scanning software and associated remediation projects.

Security Tools: Nessus, Qualys, Splunk, Trellix (McAfee), ArcSight, Nagios, ITSM.

Other Key Technologies: Cloud Infrastructure and Services (focus on secure cloud configurations) Configuration Management (security configuration standards) DevOps Practices (integrating security into DevOps practices) PKI and Digital Certificates (managing and implementing secure communication) Data encryption techniques and tools (AES, RSA, PG)

Professional Experience

Cybersecurity Engineer (3 Squared Technologies)

Montgomery, AL | June 2025 – Present

Responsibilities & Skills:

- Implemented and validated FedRAMP-required controls within Azure Government and Azure Commercial cloud environments.
- Developed and maintained compliance documentation, supporting SSP, POA&M, and continuous monitoring deliverables.
- Leveraged Azure Security Center, Azure Sentinel, and Azure Policy for threat detection, vulnerability management, and automated governance.
- Integrated Tenable Nessus, Splunk, and Trustwave SIEM for continuous vulnerability and log monitoring aligned to FedRAMP High baselines.
- Administered Azure Active Directory, Auth0, and SAP Identity Management to enforce zero-trust access controls and MFA policies.
- Ensured continuous configuration compliance using Azure Policy, custom scripts, and integration with CI/CD pipelines.
- Manage five classified environments — three IL4 and two IL6 — ensuring full compliance with DoD Cloud SRG, STIG, and RMF security standards.
- Lead daily operations for RHEL-based systems including kernel tuning, SELinux configuration, system patching, and advanced hardening for mission-critical applications.
- Support the migration of IL6 workloads to AWS IL6 (Cloud One), validating enclave configurations, cross-domain data flows, and secure automation baselines.
- Participate in Agile sprints and Technical Interchange Meetings (TIMs) to coordinate migration milestones, sprint deliverables, and system accreditation artifacts.
- Administer and secure Trend Micro Deep Security / Deep Visibility for intrusion detection, real-time monitoring, and forensic data analysis within IL6 boundaries.
- Performed security reviews of cloud-hosted applications and services, validating secure design, identity controls, and exposure risks within FedRAMP High and DoD SRG IL4–IL6 environments.
- Supported threat modeling activities for Azure workloads, identifying abuse paths, misconfigurations, and privilege escalation risks prior to production deployment.
- Leveraged DAST and vulnerability scanning tools (HP WebInspect, Tenable Nessus, Qualys) to identify application-level and infrastructure-level security weaknesses.
- Integrated vulnerability findings into CI/CD and continuous monitoring workflows, supporting risk tracking through POA&Ms and compliance artifacts.
- Familiar with SAST platforms such as Synopsys, including interpreting static analysis results and collaborating with engineering teams to remediate code-level findings.

- Analyzed vulnerability, configuration, and log data from Azure Security Center, SIEMs, and scanners to identify trends, recurring risks, and systemic control gaps.
- Translated complex security data into clear compliance and risk narratives for auditors, engineers, and program leadership.
- Communicated security findings effectively across DevOps, cloud engineering, compliance, and leadership teams to drive timely remediation and informed risk decisions.
- Contributed to security documentation and knowledge sharing to improve organizational security maturity and repeatable processes.

Senior Cyber Security Engineer

MSI (via USPO) – Montgomery, AL (*Remote*)

January 2025 – June 2025

- Participated in security incident investigations, leveraging SentinelOne and Splunk to perform root cause analysis and implement follow-up preventive measures.
- Managed Google Security Command Center (SCC) to monitor cloud threats, misconfigurations, and vulnerabilities across multi-project GCP environments.
- Created custom ETD rules to detect risky IAM activity, abnormal API usage, and unauthorized network changes.
- Integrated SCC findings with SIEM platforms to centralize cloud telemetry and improve threat-hunting workflows.
- Automated remediation using Terraform and Cloud Functions to correct SCC-identified misconfigurations.
- Used SCC Asset Inventory and Security Health Analytics to enforce CIS, NIST, and Zero-Trust security baselines.
- Monitored SCC high-severity detections such as data-exfil attempts, suspicious egress traffic, and credential misuse.
- Performed continuous compliance assessments aligned with NIST 800-53, RMF, and internal cloud security controls.
- Provided cloud-security metrics and posture reports to leadership using SCC analytics and findings trends.
- Mentored junior engineers and contributed to knowledge-sharing initiatives for improved cyber tool lifecycle support.
- Collaborated cross-functionally with security operations, cloud teams, and IT stakeholders to align security tool functionality with evolving business needs.
- Customized and automated workflows within ServiceNow for streamlined vulnerability management and incident tracking.
- Engineered modifications to Azure-native tools and Microsoft IRM configurations, strengthening cloud and data security posture in accordance with enterprise policy.
- Designed and implemented custom dashboards, alert logic, and data ingestion pipelines within Splunk to improve threat hunting and situational awareness.
- Lead the development and customization of cybersecurity tools and platforms, including integrations with Splunk, Armis, SentinelOne, and Microsoft IRM, to enhance detection, response, and compliance capabilities.

Senior Cyber Security Engineer

TCecure, LLC

Baltimore, MD
05/2022 – Present

- Developed and managed cybersecurity documentation, using Jira to track and update security policies and procedures.
- Administered Google Security Command Center (SCC) to deliver enterprise-wide visibility into cloud threats, vulnerabilities, and misconfigurations across GCP environments.
- Configured SCC detectors, ETD rules, and asset inventory to enforce STIG, NIST 800-53, and RMF alignment for cloud workloads.
- Integrated SCC with Splunk/ELK to centralize cloud telemetry and enhance threat hunting.
- Automated remediation of SCC findings using Terraform and Cloud Functions to correct IAM, firewall, and storage misconfigurations.
- Managed and secured RHEL(Redhat Linux) -based systems by implementing robust configurations and patch management.
- Managed SCCM-based patching, updates, and software deployments across diverse environments.
- Conducted vulnerability assessments using Qualys and ensured timely remediation.
- Maintained ServiceNow stories and catalog items for IT operations.
- Integrated and maintained ELK Stack(Ubuntu Linux) for real-time log analysis and monitoring critical systems.
- Automated deployment and configuration processes for network assets, reducing manual errors and deployment time by 30%.
- Integrated secure PKI authentication systems to enhance identity and access management across Linux and web server environments.
- Designed and managed LAMP stack configurations to support high-availability applications.
- Conducted in-depth troubleshooting of complex systems, reducing downtime by implementing robust diagnostic procedures.
- Automated security tasks using Ansible and Bash, ensuring compliance with STIGs.
- Monitored and managed firewall and IDPS to detect and mitigate security incidents proactively.
- Conducted vulnerability assessments and remediation using Nessus and Rapid7 InsightVM.
- Authored technical security documents, ensuring clarity and alignment with industry standards like NIST and MITRE ATT&CK.
- Integrated security documentation and investigation findings into Confluence and SharePoint, enhancing organizational communication and compliance.
- Managed vulnerability management tools for workstations, servers, networks, and applications.
- Conducted regular security audits and risk assessments and created reports to inform senior management.
- Performed incident response activities, delivering detailed analysis and technical reports.
- Monitor and manage vulnerability management tools for workstations, servers, networks, and applications.

- Patch, harden, and secure systems according to applicable Security Technical Implementation Guides (STIGs), Information Assurance Vulnerability Alerts (IAVs), and compliance reporting using the corresponding system of record.
- Manage and monitor firewall and Intrusion Detection and Prevention System (IDPS).
- Perform system administration tasks in a Controlled Unclassified Information (CUI) environment.
- Develop reports from security monitoring tools and integrate techniques to produce actionable items that improve the systems' security posture.
- Set up user accounts and workstations, ensuring compliance with security policies and procedures.
- Conduct regular security audits and risk assessments to identify vulnerabilities and implement corrective actions.
- Implement and maintain security policies, procedures, and protocols to protect sensitive data and systems.
- Respond to and mitigate security incidents, providing detailed analysis and reporting.
- Stay updated on the latest cybersecurity trends, threats, and technologies to continuously improve the security posture.

Network Engineering SME

Astrion US

Maxwell-AFB Gunter Annex -Montgomery AL

03/2021 – 05/2022

- Designed, integrated, and maintained Oracle Cloud Infrastructure (OCI) PaaS/IaaS solutions for multi-tenant IL4/IL5 workloads.
- Conducted TIMs with DoD stakeholders to manage migration planning, data transfer validation, and security documentation.
- Engineered hybrid IL4/IL5 cloud architectures for mission systems integrating OCI, Azure, and AWS, improving compliance and scalability.
- Designed redundant and disconnected failover environments, ensuring mission continuity under communication constraints.
- Collaborated with teams to produce detailed cybersecurity incident reports, simplifying complex technical information for non-technical stakeholders.
- Managed cloud-native security configurations for Azure and AWS, documenting all changes and configurations in Confluence.
- Spearheaded and sustained enterprise infrastructure services for 700 users across four teams leveraging Oracle Cloud Infrastructure, Azure, and AWS to enhance cybersecurity, scalability, and incident response capabilities.
- Led the development and implementation of cloud workflow automation across eight zones, utilizing VDI solutions, JIRA, and Atlassian reducing process times by 25% and improving deployment efficiency.
- Directed full-stack management for four development teams, with common cybersecurity tools including firewalls, anti-malware software, and intrusion detection systems shortening release cycles by 30% and enhancing data security compliance rates.
- Conducted performance evaluations and system migrations for over 800 systems transitioning from on-premise to cloud environments, ensuring optimal operation and integration of cybersecurity measures and incident response protocols.

- Designed and implemented security systems aligning with enterprise standards such as SABSA and NIST 800-53, leading to a 50% reduction in security incidents.
- Performed advanced problem identification, resolution, and system capacity planning across all cloud infrastructure, utilizing tools like Splunk and Trellox (McAfee) for security analysis and Incident Response.
- Provided Tier 3 support for troubleshooting complex technical issues in networking and systems, ensuring robust security and continuity of operations.
- Engineered cloud management strategies focusing on cost optimization, governance, and identity security, applying tools like VMware for cloud infrastructure management and security achieving a 20% reduction in annual IT spending.
- Validated and integrated cloud-native and third-party tools to enhance cloud operations and meet stringent business requirements, focusing on security enhancements and operational efficiency.
- Oversaw the installation and maintenance of server hardware and software for on-premises cloud infrastructure, ensuring high standards of security and performance are maintained.
- Configured and managed virtual environments (VMware), ensuring high availability and security compliance.
- Implemented and monitored Elastic (ELK) for enhanced observability across the network.

Sr. Cyber Security Engineer

SMS Data Solutions / Cyber Defenses Inc. 26th NOS AFINC
Maxwell-AFB Gunter Annex -Montgomery AL
10/2015 - 03/2021

- Administered comprehensive security for 12 security stacks for DISA implementations across Army, Air Force, and Navy, specializing in building secure and robust security environments integrating endpoint protection, EDR, and XDR technologies.
- Managed secure environments across IL2–IL6 for DISA and AFINC systems, applying STIGs, RMF, and FedRAMP High controls.
- Performed application and infrastructure security assessments supporting IL2–IL6 environments, including vulnerability discovery, manual analysis, and remediation tracking aligned with RMF and DISA STIG requirements.
- Conducted web application security testing using DAST tooling such as HP WebInspect, validating authentication flows, input validation, session handling, and common OWASP Top 10 risks.
- Supported secure system design through threat modeling and architecture reviews, identifying attack surfaces and control gaps prior to deployment.
- Utilized network and application scanning tools (ACAS/Tenable, Nessus, WebInspect) to identify vulnerabilities across mission systems and security stacks.
- Developed Bash and Ansible scripts to automate security validation, remediation, and configuration enforcement across large-scale Linux and Windows environments.
- Analyzed scan results and raw security data, transforming findings into actionable remediation guidance for engineers, ISSOs, and leadership.
- Authored technical findings and executive-level summaries to communicate risk clearly across technical and non-technical audiences during TIMs and accreditation reviews.
- Developed automation scripts (Ansible, Bash) to enforce IL6 STIG baselines for 300+ RHEL/Windows systems across multiple enclaves.

- Collaborated with NSA, GSA IT, and Air Force program offices to validate cyber readiness for classified network expansions.
- Installed and configured 13+ Linux applications, including SPLUNK, ACAS, and Netcool; utilized Unix scripting for large-scale deployments, application configurations, and server hardening via STIGs.
- Managed and supported 24 VMware environments consisting of 300 RHEL Servers, overseeing build, configuration, maintenance, and monitoring tasks, focusing on security enhancements incident response, and compliance with military standards.
- Configured and maintained critical network services across four regional domains, including Active Directory, DNS, DHCP, WSUS, NTP, and backups, transitioning from locally distributed to centralized architectures at military bases.
- Administered a host-based security system in a mixed virtual and physical environment for 1500+ host, and appliances, ensuring comprehensive security and compliance with DoD standards.
- Installed, administered, and optimized 5 DoD-compliant McAfee Host Base Security Servers; supported daily operations of all HBSS modules, managing threat events, and maintaining robust firewall and access control policies.
- Led vulnerability management processes, including testing and deploying patches and kernel updates for 300+ Red Hat Enterprise Linux and Windows hosts, ensuring systems met latest NIST vulnerability standards.
- Developed and maintained scripts using Bash and Ansible for automation of security tasks and system configurations, enhancing efficiency and consistency in system management.
- Developed and maintained monitoring solutions like Nagios, Cacti, and Netcool, ensuring high system availability performance and effective incident response across 12 gateways.
- Orchestrated IT infrastructure projects, from development to validation, establishing systems that ensure high network integrity and security in collaboration with GSA IT, DHS, and NSA.
- Led vulnerability management processes, including testing and deploying patches and kernel updates for 300+ Red Hat Enterprise Linux and Windows hosts, ensuring systems met the latest NIST vulnerability standards.
- Developed a SASE framework with a zero-trust architecture, integrating on-site and remote users, devices, and applications, aligning with stringent compliance standards such as FedRamp and NIST frameworks.

Systems Administrator

GCSS AF | LOCKHEED MARTIN

Maxwell-AFB Gunter Annex Montgomery, AL

01/2015 - 10/2015

- Monitored and supported various applications for the Air Force Global Combat Support System, specializing in Linux system health and performance.
- Installed, configured, and updated Linux systems, including Solaris 10, 11 and Red Hat Enterprise Linux versions 5, 6, and 7, ensuring optimal system reliability and security.
- Managed server environments including Windows Server 2008 R2 and 2012 R2, focusing on seamless integration and operation with Linux systems.
- Maintained 38 critical data feeds for the GCSS Air Force, demonstrating expertise in data management and system integration.
- Designed and implemented new data feeds, enhancing data accessibility and system functionality within the Linux environment.
- Administered software packages on Solaris platforms, ensuring software compatibility and performance optimization.

- Performed routine maintenance on file systems and executed disk formatting and partitioning tasks for internal and external stakeholders, adhering to best practices in storage management.
- Troubleshoot OS-level service issues, including web servers (Apache), database servers (MySQL), and application servers, providing robust solutions to enhance system stability and user satisfaction.
- Utilized ITSM Ticket Tracking System for documenting and tracking issues, ensuring thorough communication and issue resolution.
- Participated in a rigorous 24x7x365 on-call rotation, providing reliable and timely support, addressing critical system incidents and maintaining high service levels.

Systems Administrator
DISA DECC MONTGOMERY
Maxwell-AFB Gunter Annex -Montgomery AL
01/2011 - 01/2015

- Conducted research, testing, and implementation of new security software and controls to fortify security defenses and ensure compliance with current cyber regulations.
- Maintained, configured, and troubleshooted Red Hat Enterprise Linux-based systems, implementing strategic security measures to protect against cyber threats.
- Performed initial investigations and triage of potential security incidents, providing priority-driven analysis and response to mitigate threats effectively.
- Managed Host-Based Security System (HBSS) deployments, enhancing security postures on both NIPR and SIPR networks.
- Performed routine maintenance and patch management for Windows and Linux servers, ensuring systems were secure and up-to-date with the latest security patches and kernel updates.
- Managed incident response operations, creating and dispatching tickets to appropriate work centers within DISA for prompt resolution.
- Authored technical articles to share knowledge and enhance the security community's awareness and understanding of emerging cyber threats.
- Monitored external event sources for security intelligence, translating actionable incidents into preventative strategies for network security.
- Administered the testing and deployment of Windows security patches via Microsoft WSUS and Group Policy, ensuring systems are up-to-date and secure.
- Configured network devices including DHCP, DNS, and switch/port security settings, establishing secure and efficient network operations.
- Designed and managed organizational units (OUs) in Active Directory for specific administrative needs such as special permissions and Windows updates, ensuring structured and secure AD management.
- Maintained and administered Microsoft Windows-based applications, operating systems, and hardware, ensuring robust system performance and security compliance.
- Authored technical articles on emerging cybersecurity threats and solutions, improving team readiness.

Systems Administrator
Indus Corp

Maxwell AFB Gunter Annex
05/2010-01/2011

- Responsible for the training, onboarding, management of all INDUS Employees and System Administration
- Reviewed and defined configurations for optimized and secure network setups.
- Created automation scripts using Bash to deploy and configure network assets, ensuring efficient and repeatable processes.
- Deployed and managed software applications, focusing on secure and compliant implementations.
- Supported testing and demonstration activities to validate system functionality and resilience.
- Provided expert support for troubleshooting, patching, hardening, and configuration management tasks to maintain system integrity.
- Participated in and provided expertise for technical interchange meetings, fostering collaboration and innovation.
- Administered Linux systems (RHEL 5), leveraging advanced skills in Bash scripting and process automation.
- Configured and maintained Apache Web Server and Apache Tomcat within LAMP stacks to support web services.
- Managed PKI authentication and SSL certificate lifecycles to ensure secure communications.
- Developed and executed Kickstart installations, streamlining system deployment processes.
- Integrated Oracle Database configurations to meet operational requirements.
- Enhanced system security through adherence to DoD standards, including STIGs and RMF frameworks.

Systems Administrator
National Cash Register, (NCR)
Remote
01/2007- 05/2010

- Performed routine maintenance and troubleshooting on servers and point-of-sale (POS) systems, ensuring 99.9% uptime for retail and business clients.
- Installed, configured, and secured Windows- and Linux-based servers, tailoring solutions to meet specific client requirements.
- Conducted field installations of POS systems, integrating hardware, peripherals, and network configurations to meet operational needs.
- Implemented security measures on servers and POS systems, including firewalls, endpoint protection, and compliance with PCI DSS standards.
- Delivered on-site technical support and problem resolution for a diverse client base, often under tight deadlines.
- Upgraded and optimized server and POS hardware, including memory, processors, and storage components, to enhance performance.
- Maintained network connectivity for distributed retail environments, configuring routers, switches, and access points for seamless communication.
- Managed data backups and recovery operations, ensuring business continuity for clients in case of hardware failure or cyber incidents.
- Trained end-users on the proper use and maintenance of POS systems and peripherals, reducing support tickets by 25%.
- Documented maintenance logs, installation procedures, and incident reports, providing detailed insights to clients and management.

Education

Trenholm Technical College, Montgomery, AL
Associate's degree Information Technology, 2006
